

Brenton™

ELSP

Compact, all-in-one and low cost packaging solution

- Integrates previously separate machine functions, including case erecting, loading, sealing and palletizing.
- Utilizes just one controller and one HMI to operate all sections of the system.
- Up to 10 cpm or 20 picks per minute for companies outgrowing their hand packing operations.

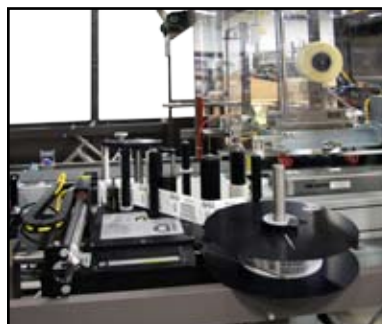

The BantamPro ELSP combination system provides customers with a flexible alternative to upgrade their manual low speed hand packing and palletizing operations.

The BantamPro ELSP occupies similar floor space on the packaging line as manual operations and less floor space compared to disparate supplier pieces of equipment integrated in the customer's facility.

Brenton stands behind the BantamPro ELSP with a 20-year tradition of innovation, experience and industry leading customer service support.

Additional equipment integration, such as a labeler, pallet dispenser and stretch wrapper, is available.
