

Brenton™

Slow speed packer for growing operations

The Brenton Pro Series Mach-1 case packer provides customers with a flexible alternative to upgrade their manual low speed hand pack operations.

It accommodates RSC cases and automatically performs multiple packaging operations, including case erecting, loading, and sealing sections within its compact footprint. Various types of product infeed systems are available as well as case sealing alternatives including either hot melt glue or tape, where a slide-out DEKKA™ tape head allows operators to perform quick changeovers.

MACH1

- Occupies similar floor space as hand pack operations
- Runs unattended, reducing labor costs
- Superior handling of bagged and sleeved products
- Same flexibility and durability as our high speed machines
- Adapts to packaging line speed
- Ideal for contract packagers, and the food/beverage, pharmaceutical, and personal goods industries
